

Keeping rural area farmers and their families at the center, Agricultural Development Trust was established in 1971. At the beginning trust has done several fundamental work on water, drought management and agricultural technologies. In addition to this trust has worked on allied agricultural businesses, irrigation schemes, dairy, goat management, poultry, plant nursery etc.

During these days Android mobile is effective tool for acquiring information in farmer's community. The agricultural based Android mobile application services help to decentralize the modern agricultural techniques within farmers. For that purpose, Agricultural Development Trust has developed the free application "Krushik" for farmers.

The app is available on google play store. Kindly visit google play store and type "Krushik or कृषिक" in search box for installation or kindly refer below link for "Krushik" app installation.

<https://play.google.com/store/apps/details?id=com.rtc.krushik>

**Main features of Krushik app:**
